GIANT IDEAL DARWIN TULIPS

Giant Ideal Darwins are superior to many of the older Darwins, the flowers, in most instances, being larger and of better substance, the stems taller and stronger. They usually begin to bloom several days before the regular Darwins and often last for a longer time. The big flowers are truly magnificent, and we recommend them for garden and cutting. Many are valuable for growing inside during the winter months.

Chameleon Tulip

7560 PINK WONDER Its ever-changing color is a delight. When first opening, the flowers are white with rosy red border, the rosy red suffusing over the entire surface so that it becomes carmine-pink when in full bloom. As the colorings change from day to day, the name "Chameleon" is quite appropriate. Blooms are large, stems are strong; in shape and habit of growth, it resembles the Darwins. Flower in May outdoors; can be forced indoors in February. 24 in.
3 for 60¢; 6 for \$1.15; 12 for \$2.20; 100 for \$15.00

Chinese Lantern Tulip

7561 GOOD GRACIOUS This tulip is so distinct we are offering it separately so it will not be overlooked. Flowers are of good size, globular and glow with such an iridescent sheen as to create the effect of a delicately colored, lighted Chinese Lantern. The color is rather difficult to describe; a glorious combination of pink, salmon, orange and yellow gives the general effect of brilliant orange; inside is a brighter orange with a contrasting yellow base. It is superb for any outdoor planting as well as valuable for cutting. 25 in. tall.
3 for 60¢; 6 for \$1.15; 12 for \$2.20; 100 for \$15.00

Cottage or May Flowering Tulips

Cottage or May Flowering Tulips are, perhaps, the most permanent of all tulips, blooming in early May, hence their name. The term "Cottage" is of recent origin, and so called because so many were planted around the country homes and cottages of England. As a class, they are rich in the more delicate and artistic shades of yellow, orange, fawn, salmon, old rose—colors missing to an extent in other late tulips.

Cottage Tulips are mostly long and oval-shaped; those with gracefully reflexed petals are offered separately as Lily Flowered, page 13. Stems are long and not so stiff as the Darwins or Breeders. Excellent for cutting and unsurpassed for garden use.

How to Grow Tulips

Outdoors: Tulips should not be planted where grown the last two seasons. Use a sunny position. Do not use fresh manure at planting time; rotted manure or bone meal may be worked into soil which must be well-drained. Plant 5-6 in. deep; 6-8 in. apart.

Indoors: A mixture of $\frac{2}{3}$ clean garden soil and $\frac{1}{3}$ leaf mold to which bone meal has been added will give best results. A 6-inch pot holds about 6 bulbs. Place bulbs about 1 in. apart each way. Cover with an inch of soil and water thoroughly. Put pots in a coldframe or heel-in in the garden for 8 weeks. Move pots indoors, bringing gradually to the average room temperature before locating permanently.

Giant Double Peony May Flowering Tulips

Immense, peony-like flowers are borne on strong stems at about the same time as the Cottage, Darwin and Breeder Tulips. Nice as a succession planting to the Early Doubles; the flowers are larger and the stems much taller. They have become quite popular in recent years for showy outdoor display and cutting. We offer the best varieties of this relatively new class which show off beautifully if planted in several groups in the border. They will grow well in partial shade.

DAFFODILS

ARE EASY TO GROW

Outdoors: Plant as early in the fall as possible, 4 to 8 in. deep and 6 to 10 in. apart; the exact distances depend on the size of the bulb and the nature of the soil. In very cold locations, mulch the ground with straw or leaves after it becomes frozen.

Indoors: Put several bulbs, about 1 in. apart (same variety), in a pot. Barely cover the bulbs with soil, water and put in coldframe or heel-in in the garden for 8 to 10 weeks to force root development before bringing the bulbs indoors for winter blooming.

Burpee's Hardy Garden Lilies

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant.

All varieties offered are highly decorative in the garden border, while the dwarfer ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend hardy lily bulbs for house culture; for this purpose, we suggest you plant the Easter Lilies offered on page 31 which also may be grown successfully outdoors in sections of the country where the winters are mild.

Delivery of Hardy Garden Lily Bulbs

Hardy Garden Lilies are sent you in the fall just as soon as the bulbs are thoroughly cured and in proper condition for planting. Some varieties will not be ready until November or early December. If you live where the soil freezes early cover the ground with manure, leaves, straw, etc., to prevent it from freezing. When lily bulbs arrive, remove covering and plant them immediately. Do not put the covering back over the bulbs until after the ground has frozen hard. Remove gradually in the spring.

BURPEE SEEDS GROW

Burpee's Giant Flowered Hyacinths

The Finest for Beds, Borders and for Growing Indoors

Among the many flowers grown from fall planted bulbs, the hyacinth stands at the top of the list. It is probably the easiest flower to grow in pots or bowls, and what could be more attractive than hyacinths in the house during the winter! Equally effective and beautiful are beds, borders or groups here and there among perennials, in combination with pansies, forget-me-nots, arabis, aubrieta, or in front of shrubs.

MAMMOTH BULBS FOR GIANT SPIKES

The spikes produced from Burpee's Mammoth Bulbs will be truly giant. They are carefully selected, of the highest quality, and are particularly desirable where the very largest flower spikes are wanted.

This beautiful lawn on Burpee's Fordhook Farms was produced from Burpee's Fordhook Finest Lawn Grass Seed

Burpee's Lawn Grass Seed

SHIPPED PREPAID ANYWHERE IN THE U. S.

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. The weather at these times is favorable for the development of domestic grass but unfavorable for most weeds and wild annual grasses.

For new lawns, sow 1 lb. of grass seed to 200 sq. ft.; 100 to 150 lbs. per acre. 1 lb. MERION Kentucky Bluegrass for 500 to 750 sq. ft. To improve old lawns, half of these amounts may be used.

4914 BURPEE'S FORDHOOK FINEST LAWN GRASS SEED Best All-Purpose Mixture, especially prepared from the highest quality seeds that can be produced. It makes a smooth, green, velvety lawn with a thick bottom, free from clumps. Only the very best fine-leaved and deep-rooted varieties for making an even, thick mass of sod are used.
